

Pivot Table & Charts

Easy Level

1. What is the purpose of a pivotable in excel?

Ans. Think of a PivotTable as a "Data Blender" If you have a massive, messy list of 5,000 Sales transactions, a PivotTable lets you:

1. **Squish it down:** Turn those 5,000 rows into a tiny table of just 5 rows (one for each region).
2. **Ask questions:** "Who sold the most?" or "Which month was best?" without writing a single formula.
3. **Flip it:** Instantly swap rows for columns to see the data differently just by dragging a mouse.

2. Create a PivotTable to show Total Sales by Region.

Ans.

Row Labels	Sum of Sales
East	467
North	347
South	2518
West	3497
Grand Total	6829

3. Apply Conditional Formatting to highlight sales greater than 400

Ans.

Date	Region	Product	Sales	Quantity
01-01-2024 00:00	West	Mangoes	456	93
27-02-2024 03:47	South	Apples	417	29
07-03-2024 16:25	West	Apples	441	44
26-03-2024 17:41	West	Oranges	441	79
14-04-2024 18:56	West	Oranges	483	97
24-04-2024 07:34	East	Mangoes	467	97
13-05-2024 08:50	South	Oranges	497	71
22-05-2024 21:28	South	Mangoes	409	81

Q7. Why are Dashboards important for decision-making in business analysis?

Ans. Dashboards are critical for business decisions because they provide:

- **Instant Clarity:** They turn rows of dates and regions into a single, clear picture.
- **Faster Action:** You can immediately see that **South Oranges** hit a high of **497**, while **West Oranges** dropped to **53**.
- **Trend Spotting:** Instead of reading line-by-line, you can visually compare if **Mangoes** are outperforming **Apples**.
- **Focus:** Using a **Slicer** lets a manager filter for just the **West** region to see all 8 sales entries at once.
